

GTAP-Migration Model

Presentation by:
Emmanuel J. Chinyama

General Features of Standard Migration Model

- Full employment.
- Bilateral movement of labour.
- Domestic and foreign workers are perfect substitutes.
- Key drivers:
 - ❖ Remittances
 - ❖ Real factor prices (P_{factreal})

Unemployment Migration Extension

- Unemployment of unskilled labour in exporting regions.

Exogenous Migration Extension

- Impact of migrants between MENA and other regions due to political instability.

Liberalization in the context of the GATS WTO negotiations.

- Developing countries in particular African countries want to take advantage of the services liberalization in the context of the WTO negotiations.

Endogenous Migration Extension

- Impact of taxing income of skilled labour in exporting country.
- Skilled labour forced to move due the reduction to their real income.
